ABSTRACT OF THE DISCLOSURE

1

- A ball chair with a retaining device has a seat (10), a spherical
- cushion (20) and two retaining pieces. The spherical cushion (20) rests on
- 4 the seat (10). The two retaining pieces are selective retaining rods or
- 5 retaining walls and are respectively attached to a rear end and a front end of
- 6 the seat (10). Thus, the spherical cushion (20) is held between the two
- 7 retaining pieces and firmly secured on the seat (10) to keep the spherical
- 8 cushion (20) from falling off the ball chair.
